

VOX CINEMA, CITY CENTRE, AJMAN, UAE

FC CONSULT were appointed as Lead Consultant in February 2016 to undertake a Turnkey service for the remodelling works in City Centre Ajman, known as the Phase 1 with Phase 2 and 3 to follow.

The work involved the re-configuration of three large screens into six smaller screens. This included the demolition works and formation of new acoustic walls and stadia along with addressing the new Fire Escape staircases necessary to meet local municipality code. We were responsible for Architect of Record, Structural Design, Acoustic and the Building Services Engineering. All works were undertaken during normal hours and the Cinema was retained fully operational at all times. The roll out of the “Kids” screen is iconic to the VOX Brand and integral in all their state of the art Cinemas.

We found there was very little As Built information, so we undertook significantly more due diligence on the existing shell and core elements as well as the existing Building Services.

The works were completed on programme and within budget. FC CONSULT have also recently been appointed to continue with Phase 3 works which are due for completion by April 2018.
